

# ROES Face Detection

New capability in ROES Desktop

# Face Detection

- New in version 9.6
- Node is utilized to position and zoom face
- Can be lab defined or end user defined
  - Designer needed for end user defined

# Face Detection

- Lab defined attributes
  - On the detection node
    - isfacebounds = true
    - fit = false
    - input = none
  - On the user image node
    - facebounds – the x,y,w,h values of the dection node.
    - If you fine tune detection node don't forget to update facebounds values

# Face Detection

- Designer Tool
  - Located in edit/draw tools on left of workspace
